INTRODUCTION

The Pen-chi Heat and Thermal Power Plant No. 3 is located within the confines of the Pen-chi Iron and Steel Plant Kung-yuan (and its 2 nautical miles southwest of the center of Pen-chi.

BASIC DESCRIPTION

The power plant is rail served and is within the security system of the iron and steel plant. The presence of a coal processing building and a probable gas pipeline from the adjacent steel plant indicates that the power plant can be either coal or gas fired. The power plant supplies steam to the steel plant.

The four stacks and their spacing indicate the presence of four boilers in the boilerhouse. The control house is integrated with the generator hall.

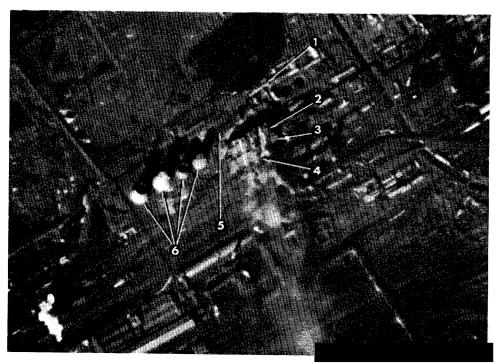

There has been no construction since the date of the latest photography used in the referenced report. Smoke and vapor were emanating from the stacks and cooling towers on all imagery referenced.
